

UKRAINIAN ARMOR

Design and
Manufacturing
Company

OUR PRODUCTS AND SERVICES

Design and manufacturing company “**Ukrainian armor**” produces:

- Specialized armored vehicles VARTA and NOVATOR in different modification
- Our range of Vehicles includes various Ballistic and Armour protection. Each model is uniquely designed, and incorporates the client’s specific requirements
- Mortar launchers and ammunition calibers 60 mm and 82 mm

Our company provides a full range of services in:

- Modernization of military equipment
- Armoring of civilian vehicles
- Skills transfer and training of soldiers
- Creation of a service center for the modernization of equipment
- Training End Users, ongoing Maintenance support, Warranty support, spare-parts and services

Ukrainian Armor company offers transfer of technologies for production and assembling of specialized armored vehicles in an end-user country.

PROFESSIONAL SERVICE - OUTSTANDING QUALITY

AV "VARTA"

Max speed: 100 km/h

AV "VARTA"

Mine resistant ambush protected vehicle VARTA is powerful, with excellent running characteristics and reliable level of anti-mine resistance and ballistic protection.

The Varta can be produced in several modifications:

- Personnel carrier
- Mortar carrier
- Reconnaissance vehicle
- Ambulance vehicle
- Tactical vehicle
- Cargo vehicle

Completion of all tests and trials of the Armed Forces of Ukraine and National Guard of Ukraine.

SERVES IN REAL COMBAT CONDITIONS.

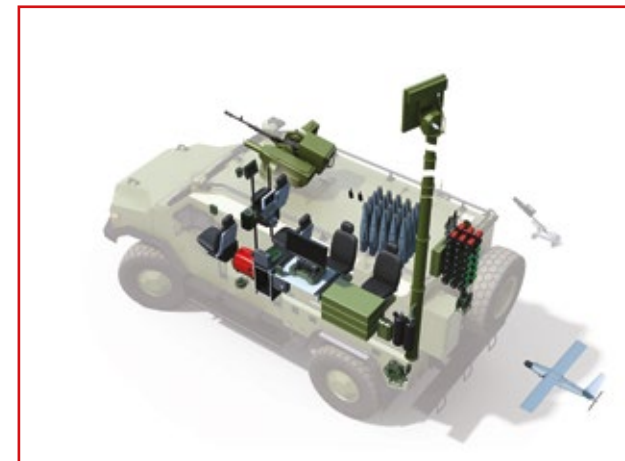

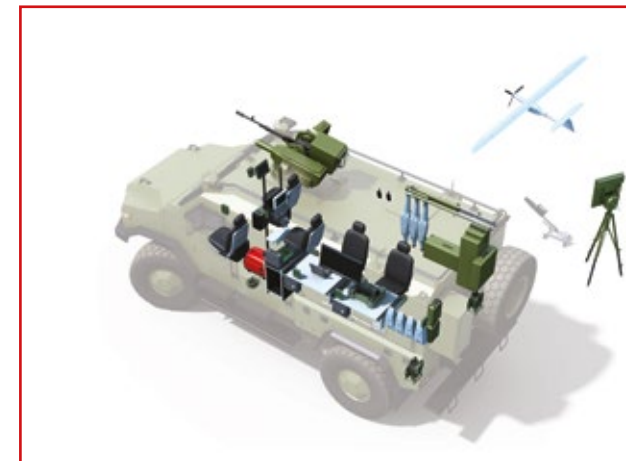

SOKIL

SOKIL

The reconnaissance-strike complex SOKIL is meant for observation, detection, tracking and destruction of armament, Military hardware and manpower of the enemy under conditions of combat operations.

The RSC SOKIL is equipped with light weapons (lightweight weapon station), communications facilities, special equipment, as well as reconnaissance and strike unmanned aircraft systems. The RSC SOKIL is used for service of ground units during patrolling, reconnaissance, defense, anti-terrorist operations and other military missions.

The RSC SOKIL with the use of modern control and communications systems ensures digital, integrated closed data transmission, automatic mission performance when EW devices are in play, automatic target tracking day and night using thermal imaging camera, transmission of target positions to the command post, and destruction of detected targets within a radius of 10 km with various types of ammunition.

WARTTA

ARMORED PERSONNEL
CARRIER

LAV "NOVATOR"

LAV "NOVATOR"

The latest development of our enterprise is a light armored vehicle "Novator", created for patrolling in mountainous terrain and during civil unrest and violations of public order, conducting special operations for the elimination of massive disturbances, the search and detention of criminals who constitute an increased public danger, transportation of wounded and persons taken into custody.

The car has a maximum speed of 120 km/h, protects the crew, landing gear, main units and aggregates and has high dynamic qualities, increased passability and smoothness of the run, capable of overcoming high distances with high and average speed, provides protection when shot from a SVD rifle, even at 10 meters.

The car performs fast maneuvers under difficult conditions due to the ideal distribution of the load on the axle base.

82 MM "UPIK 82"

MORTAR LAUNCHER 82 MM "UPIK 82"

Completion of state tests of the modern 82-millimeter mortar launcher "UPIK 82" confirmed the effectiveness of the new barrel processing technology, high wear resistance and significant advantages of the tactical and technical characteristics of the mortar launcher in comparison to existing Soviet counterparts.

The 82-mm caliber mortar launcher is designed to perform fire tasks from direct fire damage to live and enemy objects at a distance of up to 4.1 km.

ADVANTAGES:

- The use of a high-strength aluminum alloy for the support plate improved performance;
- The possibility of circular guidance without movement of the plate;
- The possibility of moving a striker in a safe position (at discharge);
- The presence of cooling ribs and increased barrel strength for the possibility of using 82 mm mortars of increased firing range;
- Reducing the side scattering of mortars when shooting twice.

60 MM "MP-60"

MORTAR LAUNCHER 60 MM "MP-60"

A mortar launcher is designed to perform fire tasks from direct fire damage to live and enemy objects at a range up to 3.5 km. The mortar launcher can be used both with a large base plate and a two-legged for firing from closed emplacement site, and with a small base plate without a double leg with an electronic sighting unit for shooting "hand held" (for units of special forces).

Advantages in comparison with similar weapons:

- Use of high-strength aluminum alloy for base plates, reduced weight and improved operational properties;
- The possibility of circular guidance without movement of the plate;
- The possibility of moving a striker in a safe position (at discharge);
- The presence of cooling ribs and increased barrel strength for the possibility of using 60 mm mortars of increased firing range (up to 3.5 Km) and increased explosive content;
- Use of an electronic sighting unit for direct shooting ems-1 and a small base plate (for units special forces).

60-MM "UB-60"

60-MM MORTAR SHOT "UB-60"

The 60-mm mortar launcher is intended for the fire damage of unarmored target and military equipment, elements of strategically and tactically important infrastructure, as well as open-loop force, single and group targets (grenade launcher, machine gun detachment, anti-tank guided missile detachment) and other means at a distance of up to 2500 m.

According to the spectacular performance of the mortar, the UB-60 is approaching a 82-millimeter caliber mortar (high-impact action, total damage radius, number of fragments). The mortar launcher shot can not be heard when it is approaching.

ABOUT US

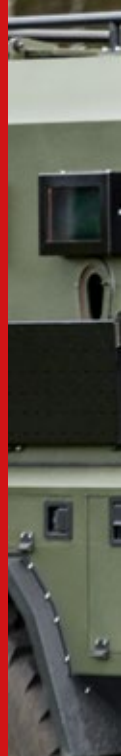

Design and manufacturing company "**Ukrainian armor**" provides services of modernization of military equipment, armoring of civilian vehicles.

The company also offers the transfer of technologies for production and assembling of specialized armored vehicles to the territory of the customer's country, training of technical staff and the creation of a service center for the modernization of equipment.

The staff of our company is constantly improving our products, so that everyone who uses it could appreciate it.

The highest honour for us is the positive feedback from combat soldiers after using our equipment in real combat.

After that, you understand that the time and strength of all of our employees bring a great benefit to our military and help the common cause improve the protection of our country.
